[Scaling Redis at Twitter \[video: 74 min\]](#)

YAO YU

Twitter runs some of the largest Redis clusters in production. To adapt Redis to Twitter's use cases, they've come up with numerous best practices and new features. Yao Yu provides a case study of running Redis at scale, complete with numbers and stories.

[DataStax Sets Out How Apache Cassandra Benefits From \\$106m Funding Boost](#)

ZDNET

DataStax's plans are to increase investment in the Cassandra developer community both within the project itself and with those in organizations developing Cassandra-oriented apps.

[Free, Blazingly Fast Disk I/O Gives StreetLight Data An Edge](#)

RACKSPACE **SPONSORED**

'StreetLight Data functions like a giant, distributed data warehouse. We receive around 5 TB of cellular data from carriers each month, and we are currently integrating 1 TB to 2 TB of GPS data per month. In response to customers' queries, we can serve up that data in less than 30 seconds.' After a lot of price/value comparison and benchmarking with cloud providers, [see why they chose Rackspace and watch the video here](#).

[Query Mongo: A MySQL to MongoDB Query Translator](#)

RJMETRICS

This could be an interesting tool for both porting code from using SQL to using MongoDB, but also as a way to learn about what's involved in producing similar Mongo queries.

[NoSQL Job Trends in August 2014](#)

ROBERT DIANA

Things are relatively stable, with strong growth throughout. MongoDB, Cassandra, HBase and Redis dominate.

[Tax Fraud Detection with Graph Databases](#)

SCOTT MONGEAU AND JEAN VILLEDIEU

A short slidedeck showing off an example of how authorities could use graphs and Neo4j to detect tax fraud.
